

# Red Gravity

I am cyber soldier,  
I am paid by your enemy.  
You can't even see me!

**Wrong! Red Gravity** has been tracking you and, now, you are caught!

Adversarial Nation States threaten everyone's electronic security and financial interests. Anti-virus programs catch bad programs, not bad people. Current cyber security monitoring systems are expensive, difficult to manage and often require days, or weeks, to detect malicious intruders.

**Red Gravity** is the most accurate and responsive intrusion detection system available. It has the ability to protect small offices and scale up to the largest facilities. Management is made simple as even complex organizational networks are visualized through a single portal. This reduces the stress of managing multiple networks while improving the ability to catch suspicious activities that span multiple networks.

**Red Gravity** is simple to install and manage. Since **Red Gravity** is a cloud-based security service, there is no need to purchase hardware or have technically advanced people on-site. When suspicious activity is detected, an alert is sent within minutes to the organization's IT staff or IT support organization, to respond and mitigate the intrusion. Most malicious hackers expect to have days, if not weeks, before they are discovered - **Red Gravity** removes that luxury.

**Red Gravity** robs the hacker's most precious advantage - time!
